**Effectively Moves Trash In All Conditions!  
Now with *Easy Access* Screw Adjust**

Will continue to operate in wet conditions. Tills soil surface to reduce crusting.

Mounts on most models  
**John Deere, Kinze,**  
**Case-IH** and **White** planters.

**Saber Tooth** design gives positive rotation to reduce plugging in heavy trash conditions.

Easy to read depth indicator with hand or power wrench adjusting knob.

Can be easily adjusted to move trash only or both trash and soil without plugging.

John Deere 1700 Series

Case IH 1200 Series

Row to row height adjustment without crawling under the planter.

# How To Move Trash Without Plugging When Planting

## A New Solution For An Old Problem

### *Farming in Trash Requires the Right Equipment*

Leaving more residue when planting to prevent wind and water erosion is a necessary and accepted farming practice. How to move the trash and make an acceptable seed bed has been a problem. Smooth or notched discs move too much soil, causing unwanted planting depressions and leaving the seed bed susceptible to crusting. Finger wheels have no concavity and when placed at an angle skid through the soil, which can bend teeth, and tend to push and wrap trash.

### *Sunco's Trash Discs Solve the Problems of Farming in Trash*

A concave disc, when placed at an angle, will turn easily and flow material to the side. Concavity, along with Sunco's unique tooth design, allows the trash discs to contact material in the seed bed, then flow and release it between the rows. This tooth design also prevents the concave disc from plowing into the soil. Sunco also separates the lead and trail discs. This is very important, because when just moving trash, trash is all that turns the discs. If they are competing for the same stalk, root balls, or residue, they will stop turning and plug. The separation of the two discs allows each disc to move material and not compete with the other disc for the same material.

*Sunco Row Cleaners with exclusive disc concavity, unique tooth design, and disc separation, allow planting in the toughest trash conditions without plugging!*

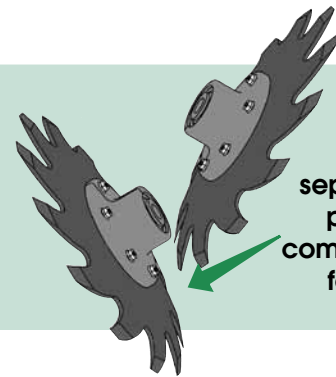

Disc concavity allows for positive rotation and trash flows out of the seedbed.

Sunco's exclusive **Saber Tooth** Design, teeth point down to release trash as discs rotate up.

Disc separation prevents competition for trash.

Sunco Row cleaners **WORK** When The Others Plug!

On this 3000 acre farm close to York, Nebraska, this farmer experienced severe plugging problems when planting the first 100 acres using a new 16 row planter equipped with factory cleaning wheels. With trash conditions even worse on the remaining acres, Sunco's Trash Discs were installed. After planting, using the words of a very satisfied farmer "We were desperate, but the Sunco Row Cleaners solved the problem. We never plugged once!"

Heavy Duty Cast Hubs With 2 Triple Seal Bearings

### Specifications

Discs - Concave 13" with swept back teeth  
Hub - heavy duty cast, 6 bolt  
Bearings - 2 high quality triple seal  
Weight:  
Mount Brackets with Two Discs - 40 lbs.
